

California Schools Healthy Air, Plumbing, and Efficiency Ventilation Program

HVAC Assessment and Maintenance Pathway

HVAC Assessment Report Worksheets
October 2021

1. System Overview
2. Filtration System
3. Ventilation Rate
4. Economizer Operation
5. Demand Control Ventilation
6. Air Distribution and Building Pressure
7. General Maintenance
8. Operational Controls
9. CO2 Monitoring

These worksheets are made available to help Program participants gather information for an HVAC Assessment Report as part of the California Schools Healthy Air, Plumbing, and Efficiency (CalSHAPE) Ventilation Program Assessment and Maintenance Grant. These worksheets are intended to be used for optional information gathering purposes only since completion of these worksheets does not constitute an HVAC Assessment Report. To comply with grant requirements and be eligible for funding, participants must submit an HVAC Assessment Report electronically by entering the required information through the CalSHAPE Online System as set forth in the most recent CalSHAPE Ventilation Program Guidelines.

These worksheets were designed and offered with a technician in mind that may not always have an electronic device to use when recording data. These worksheets can be printed out and then written on in the field. The information can later be typed into the required HVAC Assessment Report submitted electronically to the CalSHAPE Online System.

The CalSHAPE Ventilation Program Guidelines, these worksheets, and other program requirements such as a data reporting and processes are subject to change by the California Energy Commission, including but not limited to any changes to data reporting requirements from the California Public Utilities Commission. It is the participant's responsibility to use the most recent version of these worksheets and otherwise comply with the current requirements of the CalSHAPE Ventilation Program.

HVAC System Heating Input Capacity (kBtuh) Based on Nameplate:		HVAC System Heating Output Capacity (kBtuh) Based on Nameplate:	
HVAC System Cooling Capacity: (kBtuh Output)			
HVAC System Supply Fan Types: (Direct Drive, Variable Speed, Pulleys/Belts)		HVAC System Return Fan Types: (Direct Drive, Variable Speed, Pulleys/Belts)	
HVAC System Exhaust Fan Types: (Direct Drive, Variable Speed, Pulleys/Belts)			
HVAC System Supply Fan Motor Horsepower Ratings (hp) Based on Nameplate:		HVAC System Exhaust Fan Motor Horsepower Ratings (hp) Based on Nameplate:	
HVAC System Return Fan Motor Horsepower Ratings (hp) Based on Nameplate:			
Walkthrough Checklist:			
<input type="checkbox"/>	Filtration - Review system capacity and airflow to determine the highest Minimum Efficiency Reporting Value (MERV) filtration for eliminating contagions, replace or upgrade filters where needed, and verify that such filters are installed correctly.		
<input type="checkbox"/>	Ventilation Rate - Calculation of the required outside air rates for each occupied area based on the anticipated occupancy and physical verification that the ventilation rate meets or exceeds the minimum ventilation set forth by the local jurisdiction in all modes of operation. <ul style="list-style-type: none"> • Outside Air • Exhaust Air 		

HVAC ASSESSMENT REPORT WORKSHEET 1

OVERVIEW

October 2021

CALIFORNIA ENERGY COMMISSION

<input type="checkbox"/>	Ventilation System Operation - Physically test all ventilation components for proper operation. <ul style="list-style-type: none"> • Economizer • Demand Control Ventilation
<input type="checkbox"/>	Air Distribution - Verify all ventilation is reaching the served zone, how air is distributed, and that there is adequate distribution. <ul style="list-style-type: none"> • Inlet Total • Outlet Total
<input type="checkbox"/>	Building Pressure - Verify a slight positive building pressure and a negative pressure for contaminant rooms temporarily occupied by sick patrons.
<input type="checkbox"/>	General Maintenance. Verify coil condition, condensate drainage, cooling coil air temperature differential (entering and leaving dry bulb), heat exchanger operation, and drive assembly. Recommendations for additional maintenance, replacement or upgrades shall be recorded in the HVAC Assessment Report
<input type="checkbox"/>	Operational Controls - Review of HVAC control sequences to verify systems will maintain intended ventilation, temperature, and humidity conditions during operation. Verify ventilation systems are programmed to flush the building for 2 hours prior and following occupancy.
<input type="checkbox"/>	CO₂ Monitoring - To ensure proper ventilation is maintained during building operation, at least one CO ₂ monitor shall be installed in each zone of the building.
<input type="checkbox"/>	HVAC Assessment Report - Preparation of an HVAC Assessment Report that includes documentation of all verifications and deficiencies.
<input type="checkbox"/>	Energy and Ventilation Upgrades - Upon completion of the HVAC Assessment Report, a Mechanical Engineer shall review and determine if upgrades can be made to the HVAC system to increase energy efficiency, filtration, disinfection, and ventilation.

VENTILATION RATE

October 2021

CALIFORNIA ENERGY COMMISSION

<input type="checkbox"/>	Determine Minimum Required Outside Air (OSA)		
<ul style="list-style-type: none"> If available, obtain the design documents and obtain the minimum required OSA 			CFM
<ul style="list-style-type: none"> Determine if the zones actual use and occupancy matches the designs expected use and occupancy (Yes or No) 			
Original Occupancy (Design):		Occupancy Category (Use):	Occupancy:
How was original occupancy determined?			
Actual Occupancy		Occupancy Category (Use):	Occupancy:
How was actual occupancy determined?			
<ul style="list-style-type: none"> If Yes, proceed to outside air measurements. 			
<ul style="list-style-type: none"> If No, calculate the new minimum outside air rate based on ASHRAE 62.1 or Table 120.1-A of the 2019 Title 24 California Building Energy Efficiency Standards, as required by your local jurisdiction See Example at end of document 			CFM

<input type="checkbox"/>	Verify Minimum Required Outside Air (OSA)			
Steps			CAV	VAV
1	Disable demand control ventilation (if applicable)	<input type="checkbox"/> Check if NA	<input type="checkbox"/>	<input type="checkbox"/>
2	Verify unit is not in economizer mode during test (economizer disabled)		<input type="checkbox"/>	<input type="checkbox"/>
3	CAV and VAV testing at full supply airflow			
a.	Adjust supply air to achieve design airflow or maximum airflow at full cooling			<input type="checkbox"/>
b.	Measured outdoor airflow reading (cfm)		cfm	cfm
c.	Required outdoor airflow (cfm)		cfm	cfm
d.	Time for outside air damper to stabilize after full supply airflow is achieved (minutes):			min
4	VAV testing at reduced supply airflow			
a.	Adjust supply airflow to either the sum of the minimum zone airflows, full heating, or 30% of the total design airflow			<input type="checkbox"/>
b.	Measured outdoor airflow reading (cfm)			cfm
c.	Required outdoor airflow (cfm)			cfm
d.	Time for outside air damper to stabilize after reduced supply airflow is achieved (minutes):			min
5	Return to initial conditions		<input type="checkbox"/>	<input type="checkbox"/>
6	Calculations			
Determine Percent Outside Air at full supply airflow (%OA _{FA}) for Step 3.				
a.	%OA _{FA} = Measured outdoor airflow reading / Required outdoor airflow. 100 x (Step3b/Step3c)		%	%

HVAC ASSESSMENT REPORT WORKSHEET 3

VENTILATION RATE

October 2021

CALIFORNIA ENERGY COMMISSION

b.	%OA _{FA} is within 10% of design Outside Air. ($90\% \leq \%OA_{FA} \leq 110\%$) (Pass or Fail)		
c.	Outside air damper position stabilizes within 5 minutes. (Step 3d < 5 minutes) (Pass or Fail)		
VAV only: Determine Percent Outside Air at reduced supply airflow (%OA _{RA}) for Step 4.			
a.	%OA _{RA} = Measured outdoor airflow reading / Required outdoor airflow reading. $100 \times (\text{Step4b}/\text{Step4c})$		%
b.	%OA _{RA} is within 10% of design Outside Air. ($90\% \leq \%OA_{RA} \leq 110\%$) (Pass or Fail)		
c.	Outside air damper position stabilizes within 5 minutes. (Step 4d < 5 minutes) (Pass or Fail)		

<input type="checkbox"/>	Increased Outside Air
<ul style="list-style-type: none"> Document if the ventilation components can provide increased outside air if recommended. 	
<ul style="list-style-type: none"> Document unit model and serial number 	
<ul style="list-style-type: none"> Provide documentation, including relevant photographic documentation, in the assessment report so a licensed professional can determine if the minimum outside air can should be increased and can be without compromising the system's ability to maintain space conditions and pressurization. 	

Sample calculation of a new minimum outside air rate based on ASHRAE 62.1 or Table 120.1-A of the 2019 Title 24 California Building Energy Efficiency Standards, as required by your local jurisdiction.

- Sample requirement for a 900 square foot meeting room or assembly area.

Standard	Method	15 People	25 People	35 People
ASHRAE 62.1 2019	$10 \text{ CFM/person} + 0.12 \text{ CFM/ft}^2$	258 CFM	358 CFM	458 CFM
California T24 (2019)	15 CFM/person	225 CFM	375 CFM	525 CFM
California Title 24 (2019)	0.38 CFM/ft^2	342 CFM	342 CFM	342 CFM

HVAC ASSESSMENT REPORT WORKSHEET 4**ECONOMIZER OPERATION**

October 2021

CALIFORNIA ENERGY COMMISSION

Economizer Information:			
Economizer Temperature:		Economizer Enthalpy:	
Single or Differential:		Demand Control Ventilation: (Yes or No)	
Economizer Control Type:		Economizer Changeover Setpoint:	
Economizer Minimum Damper Position:			
<input type="checkbox"/> Verify Economizer Operation			
Step	Passing this test verifies the DCV and associated CO ₂ sensor operates as designed.		Results (Pass, Fail, NA)
Step 1:	Disable demand control ventilation systems (if applicable)		
Step 2:	Enable the economizer and simulate a cooling demand large enough to drive the economizer fully open (record all of the following):		
	a.	Economizer damper modulates 100% open and that the return air damper modulates 100% closed.	
	b.	All applicable fans and dampers operate as intended to maintain building pressure.	
	c.	The unit heating is disabled (if applicable).	
Step 3:	Disable the economizer and simulate a cooling demand (record all of the following):		
	a.	Economizer damper closes to its minimum position.	
	b.	All applicable fans and dampers operate as intended to maintain building pressure.	
	c.	The unit heating is disabled (if unit has heating capability).	
Step 4:	If unit has heating capability, simulate a heating demand and set economizer so that it is capable of operating (i.e., actual outdoor air conditions are below lockout setpoint). (record all of the following):		
	a.	Economizer is at minimum position.	
	b.	Return air damper opens.	
Step 5:	Turn off the unit. Record if the Economizer damper closes completely.		
Step 6:	Restore demand control ventilation systems (if applicable) and remove all system overrides initiated.		
Step 7:	Economizer functions as designed (Yes or No)		
<input type="checkbox"/>	If economizer does not function as designed and requires adjustment or repairs: <ul style="list-style-type: none"> • Document Required Repairs and Adjustments • Document information required for a repair or adjustment (i.e. measurements, model, serial, etc.) 		
<ul style="list-style-type: none"> • Include relevant photographic documentation 			<input type="checkbox"/>

HVAC ASSESSMENT REPORT WORKSHEET 5

DEMAND CONTROL VENTILATION OPERATION

OCTOBER 2021

CALIFORNIA ENERGY COMMISSION

<input type="checkbox"/>	Verify DCV Operation	
Step	Passing this test verifies the DCV and associated CO ₂ sensor operates as designed.	Results
1	Prior to functional testing, record the following:	
a.	Disable economizer controls.	
b.	Set CO ₂ concentration setpoint at 800 ppm or less. ¹	ppm
2	Simulate a signal at or slightly above the CO ₂ concentration setpoint required (Step 1b).	
a.	Apply CO ₂ calibration gas at a concentration at or slightly above the setpoint to the sensor.	ppm
b.	For single zone units, verify that the outdoor air damper modulates open to satisfy the total required ventilation air called for in the Mechanical Schedule. (P/F/NA)	
c.	For multiple zone units, the zone damper (or outdoor air damper when applicable) modulates open to satisfy the zone ventilation requirements. (P/F/NA)	
3	Simulate signal well below the CO ₂ setpoint.	
a.	Apply CO ₂ calibration gas at a concentration well below the setpoint to the sensor or ventilate the sensor as necessary.	ppm
b.	For single zone units, outdoor air damper modulates to the design minimum value. (P/F/NA)	
c.	For multiple zone units, the zone damper (or outdoor air damper when applicable) modulates to satisfy the reduced zone ventilation requirements. (P/F/NA)	
4	Verify DCV operation with economizer	
a.	Restore economizer controls and remove all system overrides initiated during the test.	
b.	Apply CO ₂ calibration gas at a concentration slightly above the setpoint to the sensor.	ppm
c.	Verify that the outdoor air damper modulates open to satisfy the total ventilation required air. (P/F)	
5	Remove all system overrides initiated during the test and return system to normal operation.	
Y/N	DCV functions as designed with a setpoint of 800 ppm¹	
<input type="checkbox"/>	If No, and the DCV requires adjustment or repairs: <ul style="list-style-type: none"> Document Required Repairs and Adjustments Document information required for a repair or adjustment (i.e. measurements, model, serial, etc.) Include relevant photographic documentation 	
If the demand control ventilation system does not maintain average daily maximum CO ₂ levels below 1,100 ppm, it shall be disabled until such time as the LEA determines that the COVID-19 crisis has passed, unless disabling the control would adversely affect operation of the overall system.		

¹ The CO₂ set point of 800 ppm is recommended by the UC Davis Western Cooling Efficiency Center. The purpose of the 800 ppm set point for demand control ventilation systems is to prevent the automated control system from overshooting a maximum 1,100 ppm CO₂ concentration.

HVAC ASSESSMENT REPORT WORKSHEET 6

AIR DISTRIBUTION AND BUILDING PRESSURE

October 2021

CALIFORNIA ENERGY COMMISSION

Verify Air Distribution and Building Pressurization			
<input type="checkbox"/>	Supply Outlets – Measure and document supply air volume (CFM). <ul style="list-style-type: none"> • Include individual outlet test report • Include duct pitot traverse report (if available) 		
	Return Inlets – Measure and document return air volume (CFM). <ul style="list-style-type: none"> • Include individual inlet test report • Include duct pitot traverse report (if available)
